

**ABSTRACT OF THE DISCLOSURE**

1       A backlight unit comprises a chassis having a bay, wall means  
2       defining the bay, an aperture opening to the bay, and an optical panel  
3       that includes at least one light management feature. The optical panel  
4       has one side forming a wall portion of the wall means. A light emitting  
5       structure is placed within the bay to light a two-dimensional area on the  
6       one side of the optical panel. The backlight unit also comprises a  
7       bracket for quick installation and removal of the light emitting structure  
8       through the aperture to and from the bay.
